

IDEATION PHASE

Define the Problem Statements

Customer Problem Statement Template: Create a problem statement to understand your customer's and user's point of view. This framework helps teams focus on genuine friction points to design intuitive flow routing experiences.

Example: Support Lead Perspective

a Customer Support Lead	route urgent support tickets accurately	manual triage takes way too long	classification logic is messy and unstructured	overwhelmed & anxious about SLA breaches
Who is the customer?	What outcome are they trying to achieve?	What problems/ barriers stand in the way?	What is the root cause behind the barrier?	What emotional outcome does this cause?

PS #	I AM (Customer / User)	I'M TRYING TO (Goal / Action)	BUT (Barrier / Problem)	BECAUSE (Root Cause)	WHICH MAKES ME FEEL (Emotion)
PS-1	A Support Agent handling incoming technical queries	Assign critical tickets to the correct specialized engineering team immediately	Tickets are frequently miscategorized and delayed	Current manual tags rely on agent guesswork without standardized rules or visual flow paths	Frustrated and unproductive
PS-2	A Helpdesk Administrator managing workflow rules	Configure automated flow logic for ticket category tagging	Building and updating rules requires complex code deployments	The support tool lacks an intuitive visual flow builder for drag-and-drop rule setup	Helpless and constrained
PS-3	An End User / Customer submitting a high-priority bug	Get quick resolution for an account access outage	Response times take hours despite flagging high urgency	The system treats all unclassified tickets equally in a single unsorted queue	Anxious and dissatisfied
