

Date	01 October 2026	Team ID	SWTID-2026-1536
Project Name	AUTO TICKET CLASSIFICATION USING FLOW DESIGN	Maximum Marks	4 Marks

PROJECT DESIGN PHASE

Solution Architecture

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Example – Solution Architecture Diagram:
