

GENAI FUNCTIONAL & PERFORMANCE TESTING

Model Performance Test Report

DATE
01 October 2026

TEAM ID
SWTID-2026-1536

PROJECT NAME / PROBLEM STATEMENT
Auto ticket classification using flow design

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass / Fail
FT-01	Text Input Validation (e.g., ticket description, subject)	Enter valid and invalid text descriptions in ticket input fields	Valid inputs accepted, errors for invalid inputs		
FT-02	Number Input Validation (e.g., ticket priority level, ID range)	Enter priority levels within and outside the valid range	Accepts valid values, shows error for out-of-range		
FT-03	Content Generation (e.g., automated category, tag assignment)	Provide complete ticket inputs and click "Classify"	Correct category and flow routed based on input		
FT-04	API Connection Check	Check if classification flow API key is correct and model responds	API responds successfully		
PT-01	Response Time Test	Use a timer to check ticket classification and routing time	Should be under 3 seconds		
PT-02	API Speed Test	Send multiple ticket classification calls at the same time	API should not slow down		
PT-03	File Upload Load Test (e.g., log files, attachments)	Upload multiple ticket attachment PDFs/logs and check processing	Should work smoothly without crashing
